

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

Yes it will and I am very opposed to their actions on this.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

I believe that if I purchase something that I am allowed to use it for my own use however I wish.

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

Possibly

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

Yes it would

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

It will go up.

Other Comments:

I will treat the people behind this proposal the same way I treated baseball after the strike in 94. I no longer watch baseball, I no longer go to baseball games. I no longer buy anything associated with baseball. I would do the same with cd's both video and audio. Currently I have a Juke Box CD-Player that holds 200 cd's all purchased. There would be no new cd's placed in that player.
